```

```
The present sequence is a mutated version of a fusion protein created using the Hepatitls C virus (HeV) NS3 and NS4A protease enzymes. These proteins are both essential for the replication of the virus, acting to cleave its replicative proteins from the polyprotein produced from the HCV genome. Inhibitors of the two proteins should be effective as antiviral treatments of the two proteins should be effective as chronic liver disease such as cirthosis, liver failure and liver cancer. The present invention concerns a number of NS3 mutants and NS3-NS4A fusion proteins which can be used to identify inhibitors of this type, as well as enabling structural studies of the protease and protease:Inhibitor complexes. This sequence contains the alpha-helix0-7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TCINGVCWTVYHGAGTRTLASPKGPV1QMYTNVDKDLVGWPAPQGSRSLTPCTCGSSDLY 118

The present sequence is a mutated version of a fusion protein created using the Hepatitis C virus (HCV) NG3 and NS4A protease enzymes. These proteins are both essential for the replication of the virus, acting to cleave its replicative proteins from the polyprotein produced from the HCV genome. Inhibitors of the two proteins should be effective as antiviral treatments of HCV infection. This is useful as NCV can lead to chronic liver disease such as cirrhosis, liver failure and liver cancer. The present invention concerns a number of NS3 mutants and NS3-NS4A fusion proteins which can be used to identify inhibitors of this type, as well as enabling structural studies of the protease and protease: Inhibitor complexes. This sequence contains the alpha-helix0-7

                                                                                                                                                                                                                                                                                                                                      This sequence represents the entire hepatitis C virus polyprotein. HCV is a member of the flavivirus family and appears to encode a basic polypeptide domain ("C") at the N-terminal of the viral polyprotein, followed by two glycoprotein domains ("EI", "E2/NSI"), upstream of the nonstructural genes NS2 through NS5.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        g
                                                                                                                                                                                                                                                                                                                                                    The present protein sequence is the fusion polypeptide, comprising the hepatitis C virus NSAA peptide-1 fragment, covalently attached to the amno terminus of NS3 catalytic domain. This fusion polypeptide contains the NS3 domain expressed in a stable. Soluble form. This fectlitates the use of the polypeptide in direct screening of potential anti-viral compounds, that are used for diagnosis and treatment of hepatitis C virus infection. It is also used to screen for inhibitors of serine protease activity. The polynucleotides are also useful to identify diagnostic or therapeutic compounds and for recombinant production of the fusion

                                                                                                                                     RNA was isolated from the plasma of a HCV scropositive human (designated "LG") and cDNA was prepared from it. The cDNA was PCR amplified using specific primers with sequences based on the prototype HCV-1 cDNA sequence (GENBANK M62321). Further amplification using nested primers resulted in 7 adjacent HCV DNA fragments which could be assembled into a full-length sequence. The DNA sequence was determined and translated into the genomic amino acid sequence. Comperison of the LG genomic amino acid sequence with that from HCV-1 showed 134 amino acid differences. (Updated on 25-MAR-2003 to correct PN field.)

It is the sequence encoded in the open reading frame of hepatitis C virus CoDA Inserts in clones 141,m 11b, 7f, 7e, 8h, 32c, 40b, 37b, 35, 36, 81, 32, 33b, 25c, 14c, 8f, a31f, 33g and 39c. It is antigenic and could be used in immunoassay reagents and vaccines and to generate antibodies useful in diagnosis and passive immunotherapy for HCV infection/non-A, (Updated on 25-WAR-2003 to correct PR field.)

                                                                                                                                                     The sequence is the peptide encoded by the composite hepatitis C virus (HCV) cDNA of AAN90331. The polypeptides are used to diagnose HCV-induced NANH+, to raise antibodies for immunoassay or treatment, our to produce vaccines.
(Updated on 25-MAR-2003 to correct PR field.)
                                                         Hepatitis C virus gene - used for prodn. of polynucleotide polypeptide(s) and antibodies for diagnosis, prevention and treatment of infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Hepatitis C virus (HCV); non-A, non-B hepatitis (HANBH)

                                                                                                                                                                                                                                   The sequence is encoded by the composite CDNA of AAN90327. These antigens react with antibodies in patients with non-A non-B hepatitis (NANBH). They can be used to diagnose HVV-induced NANBH, to raise antibodies for immunoassay or treatment, or to produce vaccines. (Updated on 25-MAR-2003 to correct PR field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Hepatitis C virus gene - used for prodn. of polynucleotide probes, polypeptide(s) and antibodies for diagnosis, prevention and treatment of infection.

```
It is the sequence encoded in the open reading frame of hepatitis C virus (HCV) cbMx inserts in clones 12f through 15c. It is antiqenic and could be used in immunoassay reagents and vaccines and to generate antibodies useful in diagnosis and passive immunotherapy for HCV infection/non-A, non-B hepatitis.

genome polyprotein - hepatitis C virus (isolate EUH1480)

W.Contains: capsid protein C; envelope protein M; hepacivirin (EC 3.4.21.9B) (nonstru protein NS44: nonstructural protein NS5
C; Species: hepatitis C virus
C; Species: hepatitis C virus
C; Species: hepatitis C virus
C; Date: 19-May-2000 #sequence_revision 19-May-2000 #text_change 19-Jan-2001
C; Accession: JC5620
R; Chamberlain, R; W; Adams, N.J.; Taylor, L.A.; Simmonds, P.; Elliott, R.M.
Biochem. Biophys. Res. Commun. 236, 44-49, 1997
A; Title: The complete coding sequence of hepatitis C virus genotype 5a, the predomina A; Reference number: JC5620; MUID:9736593; PMID:923423

C. - FUNCTION: THE SMALL PROPEINS NS2A, NS2B, NS4A AND NS4B ARE
HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.
NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.
NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.
C. - CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral position, Cys or Thr in Pl and Ser or Ala in Pl'.
C. - CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate +

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          -:- FUNCTION: NSSA SEEMS TO HAVE A TRANSCRIPTIONAL ACTIVATORY ROLE.
-:- FUNCTION: NSSB IS A RNA-DEPENDENT RNA POLYMERASE THAT PLAYS AN
FSSEMTIAL ROLE IN THE VIROS REPLICATION.
-:- CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral
precursor polyprotein, commonly with Asp or Glu in the P6
position, Cys or Thr in P1 and Ser or Ala in P1'.
-:- CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NS3-NS4A, NS4A-NS4B, NS4B-NS5A AND NS5A-NS5B.
-!- FUNCTION: NS4A FORMS A COMPLEX WITH NS3 AND IS ESSENTIAL FOR THE ACTIVATION OF NS3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS: E1 AND E2. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Viruses; ssRNA positive-strand viruses, no DNA stage; Flaviviridae;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     hepatitis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Inchauspe G., Zebedee S., Lee D.H.H., Sugitani M., Nasoff M.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Prince A.M.;

"Genomic structure of the human prototype strain H of
"Yeronic structure of the human prototype strain H of
virus: comparison with American and Japanese isolates.

Proc. Natl. Acad. Sci. U.S.A. 88:10292-10296(1991).
                                                                                                                                                                                                                                                                                                                                                                                                             3011 AA

01-APR-1993 (Rel. 25, Last sequence update)
15-SEP-2003 (Rel. 42, Last annocation update)
6enome polyprotein (Contains: Capsid protein C (Core protein) (P22);
6enome polyprotein El (GP32) (GP35); Envelope glycoprotein E2 (GP68) (GP70) (NSI); Protein P7; Nonstructural protein NS2 (P21) (EC 3.4.22 -); Protease/helicase NS3 (P70) (Hepacivirin) (EC 3.4.21.98); Nonstructural protein NS4A (P4); Nonstructural protein NS5A (P56); Nonstructural protein NS5A (P66) (P70) (RNA-directed RNA polymerase) (EC 2.7.7.48)].
Hepathis C virus (Isolate Taiwan) (HCV).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (RNA)(N).
SUBDNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SIMILARITY: THE PROTEASE BELONGS TO PEPTIDASE FAMILY $29.

Steinkuehler C., Tomei L., de Francesco R., Kuo I.C., Chen Z.;
T 'Complex of NS3 protease and NS4A peptide of BK strain hepatitis C
T virus: a 2.2-A resolution structure in a hexagonal crystal form.";
Protein Sci. 7:837-847(1998).

C Protein Sci. 7:837-847(1998).

- :- FUNCTION: THE SMALL PROTEINS NS2B, NS4B, AND NS4B ARE
HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.
NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.

C CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral presention, Cys or Thr in Pl and Ser or Ala in Pl'.

C CATALYTIC ACTIVITY: N nucleoside triphosphate ~ N diphosphate +

-!-PONTION: THE SYALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE
HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.
NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.
-!-CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral
precursor polyprotein, commonly with Asp or Glu in the P6
position, Cys or Thr in Pl and Ser or Ala in Pl'.
-!-CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           {RNA}(N).
-1- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLECCAPSID COVERED BY LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN M AND GLYCOPROTEIN E. THE NUCLECCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.

Molecular cloning of hepatitis C virus genome from a single Japanese carier: sequence variation within the same individual and among infected individuals.";
Virus Res. 23:39-53(1992).
L. PUNCTRON: THE SMALL PROTEINS NSZA, NSZB, NS4A AND NS4B ARE
I- PUNCTRON: THE SMALL PROTEINS NSZA, NSZB, NS4B AND NSS AN
Genome polyprotein [Contains: Capsid protein C (Core protein) (P22); Envelope glycoprotein E1 (GP32) (GP35); Envelope glycoprotein E2 (GP68) (GP70) (NS1); Protein P7: Nonstructural protein NS2 (P21) (E2 3.4.22.-); Protease/helicase NS3 (P70) (Heperivirin) (EC 3.4.21.98); Nonstructural protein NS48 (P4); Nonstructural protein NS54 (P56); Nonstructural protein NS54 (P56), Nonstructural protein NS54 (P65); Nonstructural protein NS54 (P60) (P70) (NA-directed NA polymerase) (EC 2.7.7.48)]. Hepatitis C virus (isolate HC-JT) (HCV).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             -1. SUBGNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS: PROTEIN M AND GLYCOPROTEIN E, THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              -!- SIMILARITY: THE PROTEASE BELONGS TO PEPTIDASE FAMILY S29.

The N-terminal disulfde linkages of human insulin-like growth
Neumann G.M., Bach L.A.;
The N-terminal disulfde linkages of human insulin-like growth
Transport of the disulfde linkages of human insulin-like growth
Transport of the disulfde linkages of human insulin-like growth
Transport of the display of the different as and have been shown to either inhibit or stimulate the growth
Transport of IGF binding proteins prolong the half-life of the IGFs and have been shown to either inhibit or stimulate the growth promoting effects of the IGFs on Cell culture. They alter the interaction of IGFs with their cell surface receptors.

1. SIMCELLULAR LOCATION: Secreted.
They alter the affinity of the protein for IGFs.
They is the protein for IGFs.
They contains 1 IGFs domain.
They contains 1 IGFs domain.
They alter the frameshifts in positions 55 and 71.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This SWISS-PROT entry is copyright.
